Preface

IDEAS'09 is the fourteenth meeting of a series of annual meetings bringing together academics and practitioners in the area of database engineering. The previous editions of IDEAS were held in Asia, Europe and North America.

IDEAS aims to address the needs of the academic community in database engineering. The convening of academics, government and industry professionals facilitates the discussion of recent progress and challenges in data mining, databases, information retrieval, applications of the Web in commerce and governance as well as database engineering. IDEAS also serves as a platform for theoreticians and practitioners to exchange their original research ideas on academic or application aspects of database engineering and their application in real systems; share their experiences on integrating new technologies into products and applications; discuss their work to real-life situations; describe their development and operations of challenging computing related systems; and identify unsolved challenges.

The IDEAS Program Committee consists of academics and professionals from different parts of the world. This committee has done an excellent job in finishing the single-blind review and on-line double-blind debate processes in record time. For example, on average, about 88% of reviews were submitted by the due date and about 3.5 reviews were received for each paper. Second, we have attracted many high-quality papers submitted by authors globally. The paper selection process was thorough and competitive. On average, each paper was refereed by at least three reviewers, and 24.3% of submissions were accepted as full research papers. For IDEAS'09, the program chairs have designed a rich program that spans over three days.

I am grateful to a number of people without whom we would not have been able to put the program together. These include our program co:chairs Domenico Saccà and Sergio Greco, and the program committee which has done an excellent job. I would also like to thank the many external reviewers who have helped "in the background," and who made sure that we could stick with our schedule. I am grateful to the high number of authors who have considered IDEAS as the target for their work. Even though we could not accommodate every submission, we hope that the extensive reviews can be of help to people.

Many thanks also go to the hard work of Alfredo Cuzzocrea and Sergio Flesca for making the local arrangements. I am also grateful to Bernard Rous and Craig Rodkin of ACM and to ACM and BytePress for publishing these proceedings. Last, not least, I am indebted to the staff of Concordia University, Università della Calabria and ICAR-CNR for making this event a reality.
