The Third ACM Symposium on Computing for Development (DEV), held on January 11-12, 2013, at Hotel Chancery Pavilion in Bangalore, India was co-located with COMSNETS, the 5<sup>th</sup> International Conference on Communication Systems and Networks.

In its third edition, the DEV conference aspires to become the premier venue for disseminating novel research at the overlap of technology and global development. In particular, it focuses on highlighting research results in emerging contexts where conventional computing solutions are often inappropriate due to various contextual factors - including, but not limited to, cost, language, literacy, and the availability of power and bandwidth. Focusing on innovative technical solutions to these unique application, infrastructure and user challenges, the DEV conference fosters exchange between computer scientists, engineers, and other scholars and practitioners interested in the use of information and communication technologies (ICTs) for development.

This year's conference featured 15 full papers and 38 poster presentations, which were selected from a pool of 70 submissions. Each paper underwent a rigorous review process, each receiving at least 4 reviews from leading researchers in the field. The accepted papers span diverse fields such as mobile data collection, text messaging, IVR systems, medical devices, and sensing, all with usage models and/or applications inspired by problems and issues encountered in the developing world. The program also included keynote presentations by leading practitioners who work in the space of global development: Tarun Vij (Country Program Leader for PATH India) and Brij Kothari (Inventor of Same Language Subtitling and Professor at IIM Ahmedabad India). In a new addition, it also featured poster presentations by over 30 local organizations who do work in technology and development in the Indian context.
